ABSTRACT

This publication contains selected data from the 1970 Census of Population Fourth Count, summarized for school districts. The data are intended to fulfill, in part, the information needs of those individuals and organizations concerned with education who lack access to computer-based information processing facilities. National summary tables are presented that show the distribution of (1) school districts with enrollments of 300 or more for 13 selected social and economic indicators, and (2) public school pupils according to the community characteristics of their school district. These distributions are further broken down by region, urban status, and school district enrollment size. A detailed school district data table gives the values for 36 selected community social and economic indicators for each U.S. school district with an enrollment of 25,000 or more. (Author/MLP)

In our judgement, this document is also of interest to the clearinghouses noted to the right. Indexing should reflect their special points of view.

HIGHLIGHTS

Family Income

Districts with high median incomes had large enrollments and were located in urban areas in the Northeast and North Central regions. Districts with low median incomes had small enrollments and were located in rural areas in the South.

Poverty Concentrations

In 19 percent of the school districts, 25 percent or more of the children in 1970 were from families with incomes below the poverty level. The districts with high poverty concentrations tended to be in the South, in rural areas, and in school districts with enrollment of less than 2,500.

In 311 districts (3 percent) more than 50 percent of the children came from poverty families. These districts enrolled more than 750,000 pupils. Only 4 of these districts had enrollments over 10,000; most were rural and 85 percent were in the South.

Racial/Ethnic Composition

Negro: Eighty-five percent of the school districts had less than 10 percent Negro population. Of those districts having high (over 10 percent) Negro concentrations, 79 percent were located in the South and 10 percent were in the Northeast.

In 1970, 197 school districts (2 percent) had majority Negro populations. These districts enrolled over 932,000 public school pupils. Only 10 of these had enrollments over 10,000; 89 percent of the majority Negro districts were in the South and of these 67 percent were rural. Outside the South, only 1 of the other 21 majority Negro districts was rural.

Spanish Heritage: Ninety-two percent of the districts had less than 10 percent Spanish heritage population. Of those districts having over 10 percent Spanish heritage concentrations, 67 percent were in the West and 31 percent were in the South.

Non-English Mother Tongue

In 1970, 17 percent of the school districts had 25 percent or more non-English mother tongue population. These tended to be urban districts in the Northeast and West and rural districts in the North Central region.

(Continued inside back cover)

HIGHLIGHTS--(Continued from inside front cover)

Nonpublic School Enrollment

In most districts less than 5 percent of the pupils were enrolled in nonpublic schools. Districts with high nonpublic school enrollment were generally located in the urban areas of the Northeast and North Central regions.

Dropout Rates

Dropout rates were highest in the South, in urban areas, and in the larger school districts.

Absence of One or Both Parents

The highest concentrations of children with one or both parents absent were found in the South, in urban areas, and in larger school districts.

Districts With Enrollments Greater Than 25,000

Of the 182 school districts with enrollments greater than 25,000, 18 (10 percent) had median family incomes below \$8,000 while 79 (43 percent) had median family incomes over \$10,000.

In 1970, 142 districts (78 percent) had less than 20 percent of the children from poverty families; 128 (70 percent) had less than 20 percent Negro population and only 3 (2 percent) had majority Negro populations; 128 (70 percent) had less than 5 percent Spanish heritage population and only 5 (3 percent) had 40 percent or more Spanish heritage concentration; 129 districts (71 percent) had less than 20 percent non-English mother tongue population and only 9 (5 percent) had 40 percent or more non-English mother tongue concentration.

FOREWORD

The National Center for Education Statistics (NCES), in addition to issuing the results of its own studies on the educational system in the United States, also serves school administrators and planners by presenting selected statistical data available from other Federal agencies. In particular, this publication is part of a program to facilitate the use of the U.S. Census data by school planners and to relate these data to other information on school district resources and areas served.

The vast number and variety of school districts have made Census data on communities served difficult to obtain. The boundaries of areas for which Census data were compiled seldom coincided with school district boundaries; these, in many cases, were not defined so that they could be mapped and compared with other areas. As the first step in developing this planning tool, NCES, in cooperation with State officials, developed a unique set of school district maps organized in standard form. Using these maps on which the school district boundaries had been drawn, the Census areas within each district could be identified. Where the boundaries of two sets of areas did not coincide, appropriate approximations were developed. Thus, it was possible to develop a conversion tape so that the 1970 Census of Population and Housing summary tapes could be retabulated to summarize data by school district. These tabulations covered all districts with enrollments of 300 or more pupils. For the 21 very large school systems, the administrative subdistricts were also shown.

The 1970 Census material has already been made available to school planners in tape form and has been widely used. An updated version reflecting changes in school district boundaries from 1970 to 1974 will soon be ready. Microfiche and on-line computer access have already been added. The present publication summarizes the data contained in the Fourth Count Summary Tape of the 1970 Census for the country as a whole and provides a description not hitherto available of the communities served by the school districts.

A second publication in this series, now in preparation, will relate the community characteristics shown by the 1970 Census to the school resources of the school districts as surveyed.

by NCES's Elementary and Secondary General Information Survey. These data have been available on tape for some time.

The cooperation of many State officials administering the Nation's school systems is gratefully acknowledged, as is the contribution of Marshall Turner, Robert Durland, and Richard Hornseth of the Bureau of the Census. Significant assistance with the project was furnished by Allan Paller and Bruce Zweig of Applied Urbanetics, Inc., and by Milton Chorvinsky of NCES.

1. INTRODUCTION

The National Center for Education Statistics (NCES) has widely distributed the 1970 Census Fourth Count School District Data Tapes (SDDT). These computer-readable magnetic tapes contain data from the 1970 Census of Population Fourth Count, summarized for school districts. (For a description of this data base, see appendix C.)

This publication contains selected data from these computer tapes intended to fulfill, in part, the information needs of those individuals and organizations concerned with education who lack access to computer-based information processing facilities.

Three sets of tables are presented, including:

- National summary tables showing the distribution of school districts with enrollments of 300 or more for 13 selected social and economic indicators. These distributions are further broken down by region, urban status, and school district enrollment size (tables 1-13);
- National summary tables which show the distribution of public school pupils according to the community characteristics of their school district. These tallies of pupils are further broken down by region, urban status, and school district enrollment size (tables 14-26);
- A detailed school district data table giving the values for 36 selected community social and economic indicators for each U.S. school district with an enrollment of 25,000 or more* (table 27).

An analysis of a common set of 13 indicators is presented in tables 1-26. These indicators include:

- median family income;
- percent of children 6-17 in families below the poverty level;

* Due to a coding error in the enrollment category for St. Louis, only a limited amount of data is available for that school district.

- Percent Negro*;
- Percent Spanish heritage*;
- Percent non-English mother tongue;
- Percent out-of-State migrants (1965-70);
- Median years of school completed by persons aged 25 or over;
- Percent of kindergarten-through-12th-grade pupils in nonpublic schools;
- Percent aged 16-64 with less than 15 years of school who have received vocational training;
- Percent of population aged 16-21 who left high school without graduating;
- Percent 5-17;
- Percent 14-17 in labor force;
- Percent of children under 18 with one or both parents absent.

In addition to the aggregate values, the indicators are shown separately for Negro and Spanish heritage persons when they represent a significant portion of the population.

The 13 indicators listed above are included among the 38 indicators displayed in table 27. Definitions of socioeconomic indicators appear in chapter 2.

* The terms "Negro" and "Spanish heritage" are used throughout this publication to maintain consistency with the wording of the 1970 Census.

2. DEFINITIONS

District Enrollment Size

In the summary tables, each district was assigned to one of six enrollment size categories based on the enrollment reported on the 1969 or 1970 School District Universe tape files (the 1969 figure was used whenever possible). The six categories are:

25,000 or more;
10,000 to 24,999
5,000 to 9,999
2,500 to 4,999
1,000 to 2,499
300 to 999

Community, Social, and Economic Characteristics

Age: The age of each respondent to the Census is the number of years completed as of April 1, 1970.

Race: Respondents to the Census were asked to assign themselves to one of nine racial categories: White, Negro or Black, American Indian, Japanese, Chinese, Filipino, Hawaiian, Korean, Other. In cases of mixed parentage, the race of the father was used. Persons who responded to "Other" were asked to list their race. These were usually assigned to one of the other eight categories. Since the 1970 Census obtained information on race primarily through self-enumeration, the data on race represent essentially self-classification by people according to the race with which they identify themselves.

Mother tongue: A person's mother tongue was the primary language spoken in his home when he was a child.

Spanish heritage: Three separate definitions of Spanish heritage were used in the 1970 Census:

In 42 States and the District of Columbia --

Persons reporting Spanish as mother tongue or members of families in which the husband or wife reported Spanish as mother tongue;

In the five Southwestern States (Arizona, California, Colorado, New Mexico, and Texas) --

Those described above plus persons with a Spanish surname;

In New York, New Jersey, and Pennsylvania --

Only persons born in Puerto Rico or those with one or more parents born in Puerto Rico.

Migrant from outside State: Migrants were those persons reporting residence for April 1, 1965, in a different State from their April 1, 1970, residence.

Region: The four regional categories used in this study follow the Bureau of the Census definitions. They are:

<u>Northeast</u>	<u>North Central</u>	<u>South</u>	<u>West</u>
Connecticut	Illinois	Alabama	Alaska
Maine	Indiana	Arkansas	Arizona
Massachusetts	Iowa	Delaware	California
New Hampshire	Kansas	District of Columbia	Colorado
New Jersey	Michigan	Florida	Hawaii
New York	Minnesota	Georgia	Idaho
Pennsylvania	Missouri	Kentucky	Montana
Rhode Island	Nebraska	Louisiana	Nevada
Vermont	North Dakota	Maryland	New Mexico
	Ohio	Mississippi	Oregon
	South Dakota	North Carolina	Utah
	Wisconsin	Oklahoma	Washington
		South Carolina	Wyoming
		Tennessee	
		Texas	
		Virginia	
		West Virginia	

Urban status: The three urban status indicators are based on the percentage of the school district population which resides in areas classified as "urban" by the Bureau of the Census. The categories are:

Urban: 80 - 100 percent
Mixed: 20 - 79.9 percent
Rural: Less than 20 percent

Areas classified as "urban" include incorporated or unincorporated cities, villages, towns, or boroughs with 2,500 or more inhabitants plus smaller places with closely settled areas of 100 or more housing units.

School enrollment status: Persons were considered enrolled in school if they reported attending a "regular" school or college at any time between February 1, 1970, and the date of the Census (nominally, April 1, 1970). Public and private, part-time and night school students were included here; specialized vocational, trade, or business school students, and on-the-job trainees were not included.

Nonpublic school enrollment status: Persons were considered enrolled in nonpublic schools if: (a) they were "enrolled" in school as defined above, and, (b) they were attending a parochial or private school.

Years of school completed: All responses to the question on years of school completed were scaled to a standard of 12 years of elementary through high school. Grades skipped were counted as completed years; grades repeated were ignored. For those who attended systems based on 11 years of school instead of 12, an extra year was added for those who completed at least the seventh grade.

Vocational training: Persons who had completed a formal vocational training program in high school, through an apprenticeship program, in a school of business, in a nursing school or trade school, in a technical institute, in the Armed Forces, or in Job Corps training were considered to have received vocational training. Excluded from vocational training programs were single courses which were not part of an organized program of study, on-the-job training in company schools, training by correspondence, and basic training in the Armed Forces.

Head of family: If a married woman living with her husband was reported as the head, her husband was considered the head for the purpose of simplifying the tabulations.

Related children: All persons under 18 years of age in a household who were related to the head of the household were classified as related children.

Labor force: The labor force included all persons who, during the Census reference week, were: (a) "at work" - those who did any work at all as paid employees or in their own business or profession, or who worked 15 hours or more without pay at a family farm or business; (b) "with a job but without work" - those who had jobs or businesses but did not work during the Census reference week due to illness, bad weather, industrial dispute, vacation, or other personal reason; or (c) "unemployed" - those who were without jobs but who were seeking employment and were available for work during the 4 weeks prior to the Census.

White collar workers: White collar occupations included professional, technical, and kindred workers (physicians, dentists, and other health workers, teachers, technicians, mathematicians, scientists and engineers, clergymen, researchers, entertainers, research as-

sistants), nonfarm managers and administrators, salesworkers, and clerical and kindred workers (bookkeepers, secretaries, typists, etc.).

Family income: A family income was calculated by summing the incomes received by all family members 14 years of age and over. All incomes were tallied including wages, salaries, Social Security payments, public assistance payments, and insurance benefits. Reimbursements for insured medical expenses were not included.

Poverty status: The Bureau of the Census established different poverty income thresholds for several family sizes, for farm and nonfarm families, and for families with male and female heads. At the core of this definition of poverty was a nutritionally adequate food plan designed by the Department of Agriculture for "emergency temporary use when funds are low." Poverty thresholds were computed on a national basis only. No attempt was made to adjust the thresholds for regional, State, or other local variations in the cost of living (except for the farm-nonfarm differential). The poverty thresholds used in the 1970 Census are shown in table A.

Foreign stock: Foreign born persons and native born persons of mixed parentage were included in this category.

Table A.--Weighted average thresholds at the poverty level, by size of family, sex of head, and by farm and nonfarm residence: United States, 1969

Size of family	Total	Nonfarm			Farm		
		Total	Male head	Female head	Total	Male head	Female head
All unrelated individuals	\$1,834	\$1,840	\$1,923	\$1,792	\$1,569	\$1,607	\$1,512
Under 65 years	1,888	1,893	1,974	1,826	1,641	1,678	1,552

3. CHARACTERISTICS OF SCHOOL DISTRICTS AND PUPILS

Tables 1-26 show summary social and economic distributions of U.S. school districts and public schools in systems with 1969-1970 enrollments of 300 or more. Each of these distributions is further broken down by region, urban status, and enrollment size. As a prelude to the analysis of the socioeconomic indicators, the underlying geographic distributions and enrollment sizes are discussed below.

Enrollment Sizes and Geographic Distributions

Most U.S. school districts had enrollments of less than 2,500 in 1970. As figure 1 and table B show, only 6 percent of the districts had enrollments greater than 10,000. However, because of their large size, districts with enrollments of 10,000 or more served almost half of the enrolled pupil population. In general, a school district was more likely to be small than large, but an individual pupil was more likely to be enrolled in a large school district.

The North Central region of the U.S. had the largest share of school districts, and the West had the smallest. The Northeast and South contained approximately equal numbers and together constituted almost half of the total number of U.S. school districts. However, the South served almost the same number of pupils as the North Central region. Pupils in these two regions represented over 60 percent of the total U.S. public school enrollment (figure 2).

Approximately half of all U.S. school districts were located in rural areas. These tended to be small districts and therefore served only about 15 percent of the Nation's pupils. Urban school districts tended to be much larger but represented only one-fourth of the total number of districts. They served well over half of all public school pupils (figure 3).

FIGURE 1.--DISTRIBUTION OF SCHOOL DISTRICTS WITH ENROLLMENT OF 300 OR MORE AND OF PUBLIC SCHOOL PUPILS, BY ENROLLMENT SIZE OF DISTRICT: UNITED STATES, APRIL 1970

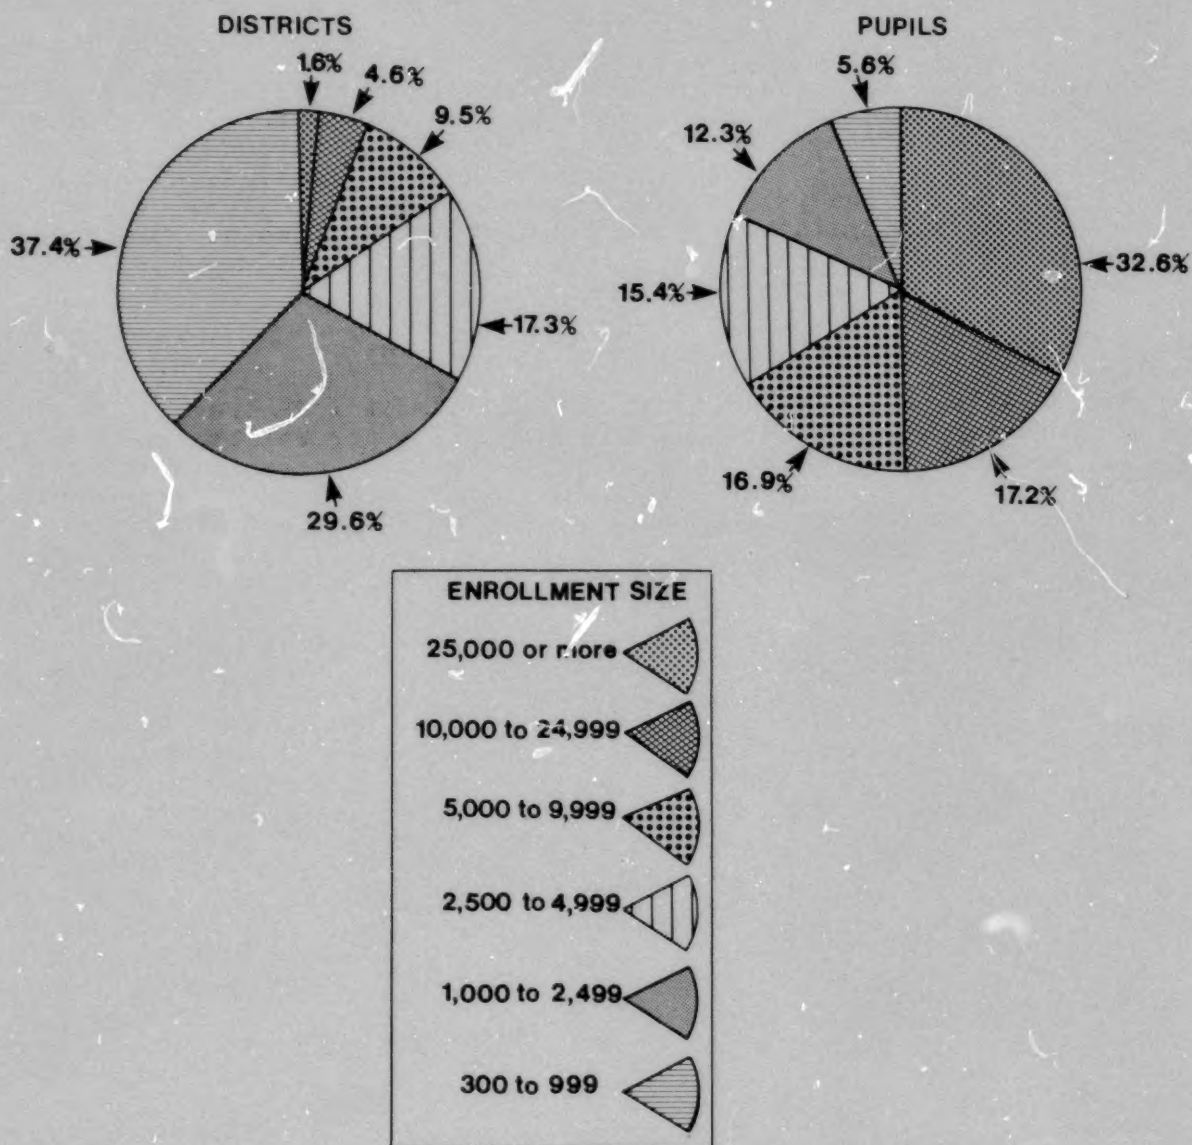

Table B.--Distribution of school districts with enrollment of 300 or more and of public school pupils, by size of district:

FIGURE 2.--DISTRIBUTION OF SCHOOL DISTRICTS WITH ENROLLMENT OF 300 OR MORE AND OF PUBLIC SCHOOL PUPILS, BY REGION: UNITED STATES, APRIL 1970

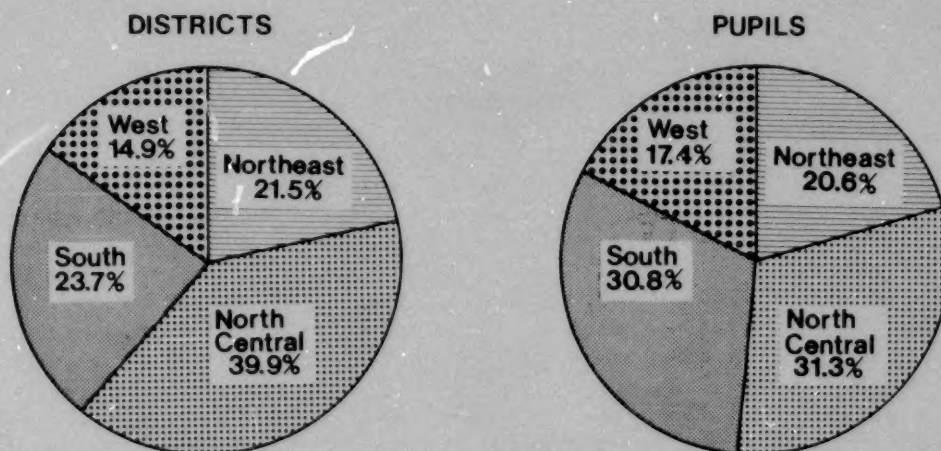

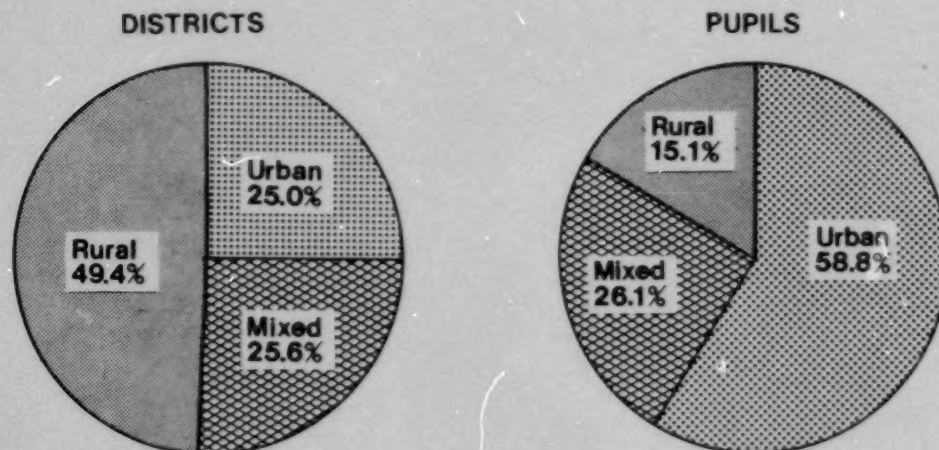

FIGURE 3.--DISTRIBUTION OF SCHOOL DISTRICTS WITH ENROLLMENT OF 300 OR MORE AND OF PUBLIC SCHOOL PUPILS, BY URBAN STATUS: UNITED STATES, APRIL 1970

Tables C and D present regional distributions of districts and public school pupils for each of the three urban status categories. The totals in these tables are of value in establishing the significance of the patterns in tables 1-26.

Table C.--Distribution of school districts with enrollment of 300 or more, by urban status and region: United States, April 1970

Region	Total		Urban		Mixed		Rural	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
Total United States	11,620	100.0	2,913	100.0	2,969	100.0	5,738	100.0
Northeast	2,494	21.5	904	31.0	667	22.5	923	16.1
North Central	4,639	39.9	928	31.9	1,032	34.8	2,679	46.7
South	2,754	23.7	557	19.1	777	26.2	1,420	24.7
West	1,733	14.9	524	18.0	493	16.6	716	12.5

Table D.--Distribution of public school pupils in school districts with enrollment of 300 or more,
by urban status and region: United States, April 1970

Region	Total		Urban		Mixed		Rural	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
Total United States	45,589,946	100.0	26,510,246	100.0	11,918,392	100.0	6,861,308	100.0
Northeast	9,380,705	20.6	6,267,423	23.4	2,006,959	16.8	1,106,323	16.1
North Central	14,259,172	31.3	7,763,630	29.0	4,102,230	34.4	2,393,312	34.9
South	14,034,016	30.8	6,851,374	25.6	4,412,660	37.0	2,769,982	40.4
West	7,916,053	17.4	5,927,819	22.1	1,396,543	11.7	591,691	8.6

Table E shows the average school district enrollment size for each of the four regions. The table shows that pupils in the South and West tend to be enrolled in larger districts than pupils in the Northeast and North Central regions.

The summary tables in this publication do not show the distribution of community characteristics by enrollment size within regions. However, trends toward larger or smaller districts within regions can be deduced through comparisons with table F (page 15).

Table E.--Average enrollment size of districts with enrollments of 300 or more, by region:
United States, April 1970

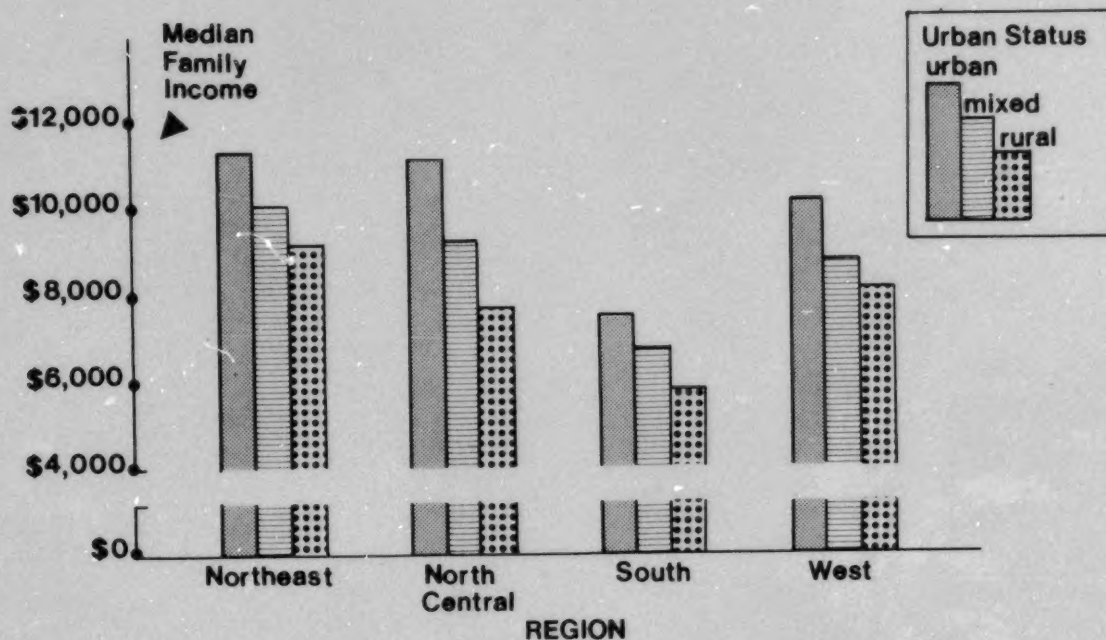

Region	Average enrollment size
Total United States	3,923
Northeast	3,761
North Central	3,074
South	5,096
West	4,568

Community, Social, and Economic Characteristics

Median family income: Higher income districts tended to be located in the Northeast and North Central regions. They were generally in urban areas and tended to be larger than lower income school districts. Of the 3,188 districts showing median family incomes above \$10,000, 1,293 (41 percent) were in the Northeast and 1,334 (42 percent) were in the North Central region; 1,653 (52 percent) were in urban areas.

Districts with lower median incomes were mostly in the South and in rural areas. Of the 2,910 lower income districts with median incomes below \$7,000, 1,714 (59 percent) were located in the South; 2,124 (73 percent) were in rural areas. The median family income for school districts with enrollments greater than 10,000 was \$9,995 and for districts with enrollments of 300 to 399, median family income was \$7,679 (figure 4 and tables 1 and 14).

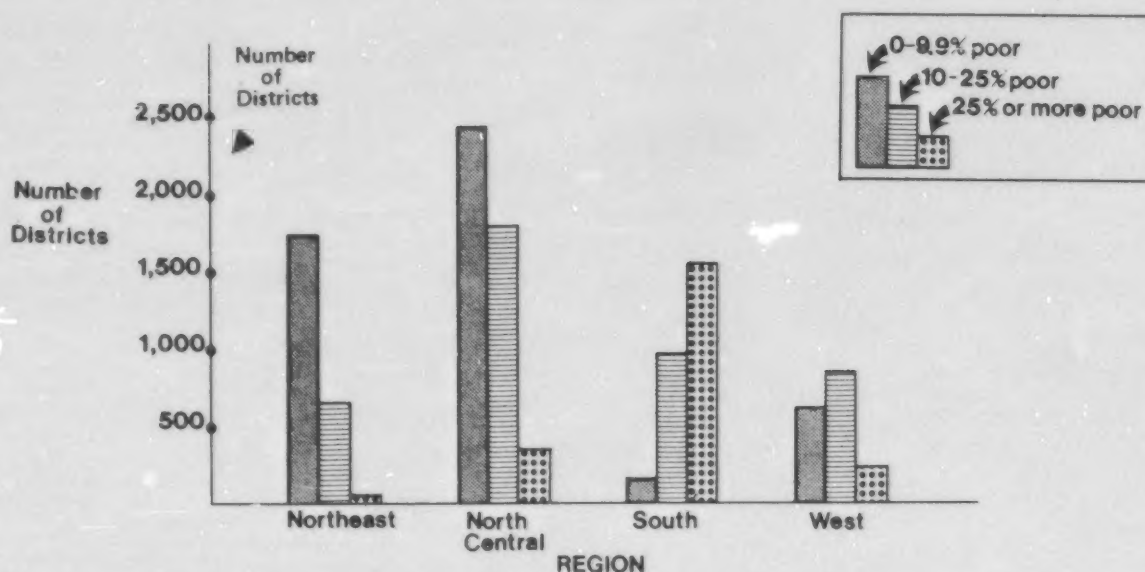

FIGURE 4.--SCHOOL DISTRICT MEDIAN FAMILY INCOME, BY REGION AND URBAN STATUS: UNITED STATES, APRIL 1970

Poverty concentrations: Districts with high poverty concentrations (see "poverty status" in chapter 2) had the same general distribution as districts with low median family income. Of the 2,179 school districts in which more than 25 percent of the children were from poverty families, 1,570 (72 percent) were in the South, 1,433 (66 percent) were in rural areas, and 1,537 (70 percent) had an enrollment of less than 2,500 (figure 5 and table 2).

The distribution of pupils enrolled in high poverty districts followed a similar pattern. Districts in which more than 25 percent of the children were from poverty families handled 6,143,955 pupils, or 13 percent of the total U.S. enrollment. Of these, 4,622,695, or 75 percent, were in the South (table 15). Further, about 39 percent were in rural districts and 37 percent in mixed districts.

FIGURE 5.--DISTRIBUTION OF SCHOOL DISTRICTS BY POVERTY CONCENTRATION AND REGION: UNITED STATES, APRIL 1970

Race and ethnicity:

Negro: Districts in which over 25 percent of the population was Negro were for the most part located in the South (710 of the 800, or 89 percent). Most U.S. districts, however, were at the other end of the spectrum: 9,188 (79 percent) of all U.S. districts with 300 or more pupils had less than 5 percent, while only 197 (2 percent) had more than 50 percent Negro enrollment (table 3).

Table F gives a region-by-region comparison of the average enrollment size of school districts in which over 25 percent of the population was Negro. It shows that districts with significant Negro populations tended to be much larger than other districts. This trend is especially marked in the North Central region, but it is also very prevalent in the Northeast and West. The trend in the South, while significant, is not nearly as strong as in the other regions.

Table F.--Average enrollment size of school districts with enrollment of 300 or more in which over 25 percent of the population was Negro, by region: United States, April 1970

Region	Average enrollment size	
	All districts	Districts with over 25 percent Negro population
Total United States	3,923	8,375
Northeast	3,761	15,523
North Central	3,074	35,951
South	5,096	6,243
West	4,568	14,473

Race and ethnicity (continued)

Spanish heritage: The Spanish heritage population was less than 5 percent of the total in 87 percent of the districts. These districts enrolled 78 percent of the total public school pupils (tables 4 and 17). Districts with larger Spanish heritage populations tended to be located in the West and in the South.

Districts with moderate-sized Spanish populations (5 to 24.9 percent) were generally the larger districts (the average enrollment was 8,325). Those with very large Spanish populations (25 percent or more), however, were generally small districts (the average enrollment size was 3,140).

Years of school completed: Districts in which the median number of school years completed for persons 25 years of age and over was 13 years or more (most people having some college education) were most often in the Northeast, North Central, and West regions. Nearly all were in urban areas, except in the Northeast region, where over 30 percent were in mixed areas (table 7).

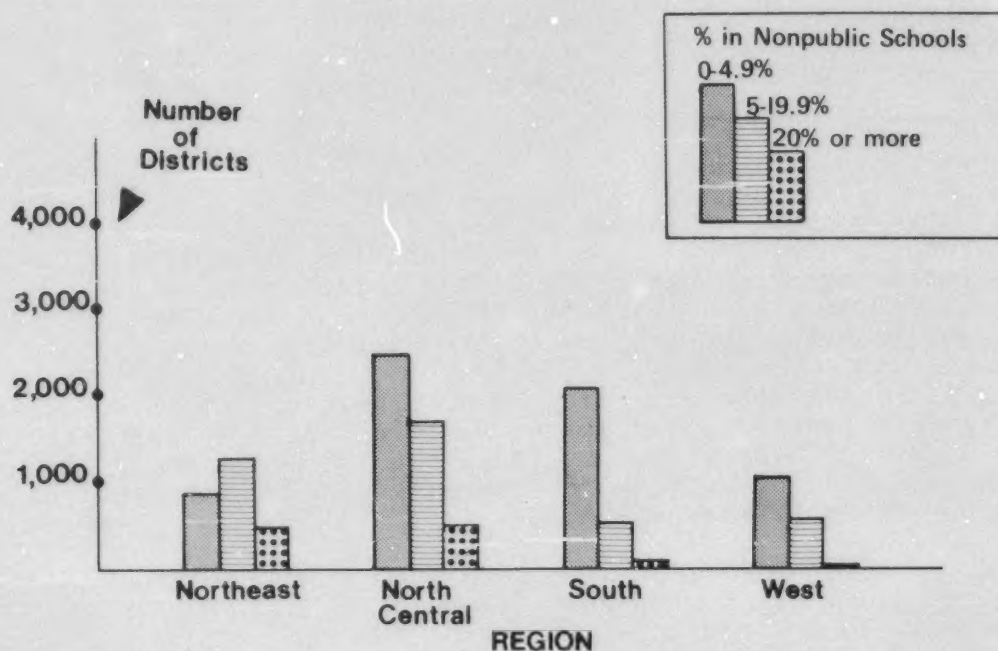

Persons living in the smallest districts frequently had completed fewer years of education than those in larger districts. For 22 percent of the districts with enrollments of 300-999, the median number of school years completed was less than 10. This was true of only 2 percent of the districts of 25,000 or more.

Nonpublic enrollment: Nonpublic enrollment was highest in the Northeast region and lowest in the South. Figure 6 summarizes the regional distributions of nonpublic enrollment displayed in table 8.

Low nonpublic enrollment was prevalent in smaller districts. The average enrollment size of districts with less than 5 percent non-

public enrollment was 2,170. For those with 5 to 19.9 percent, it was 6,215, and for districts with 20 percent or more, 6,883.

FIGURE 6.--DISTRIBUTION OF SCHOOL DISTRICTS, BY PERCENT OF K-12 PUPILS ENROLLED IN NONPUBLIC SCHOOL AND BY REGION: UNITED STATES, APRIL 1970

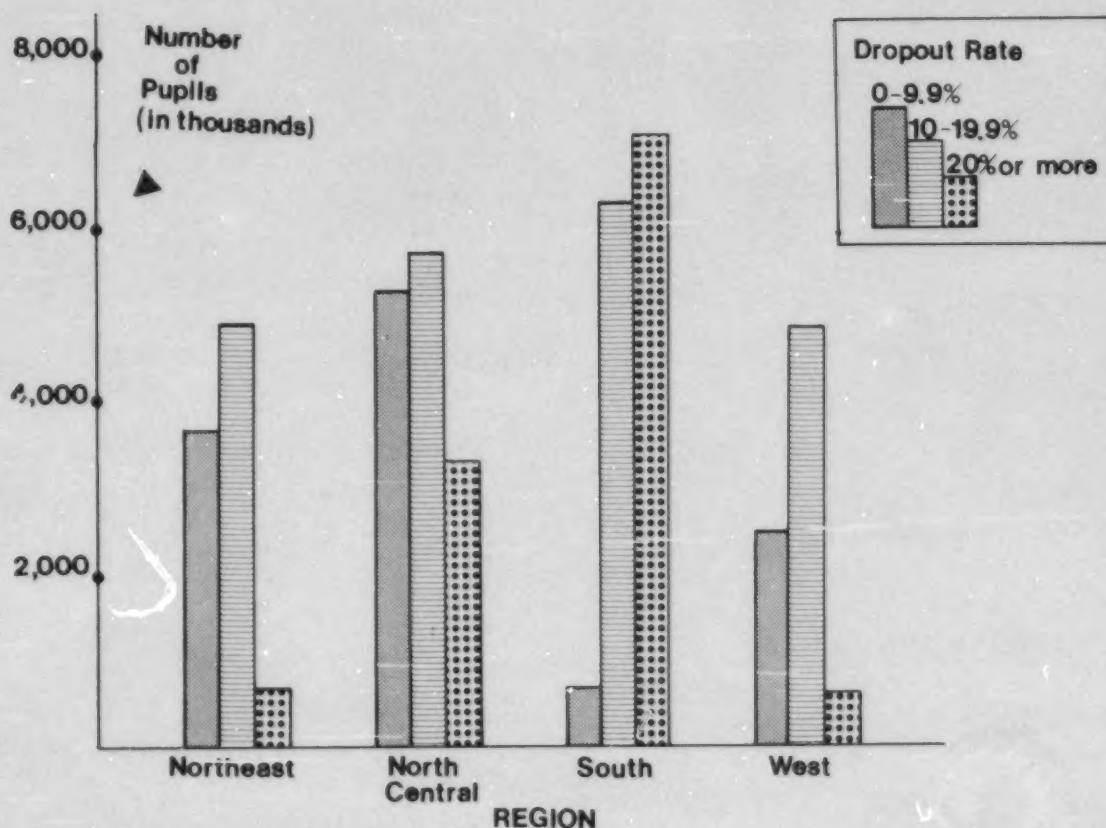

Vocational training: Table 9 shows that in 62 percent of the urban districts, more than 25 percent of those persons aged 16 to 64 without a college degree had received vocational training compared to 19 percent of the rural districts. This is to be expected since occupations for which vocational training is relevant tend to be most plentiful in urban areas.

According to region, the Northeast has the highest frequency of vocational training, followed in descending order by the West, the North Central, and South.

Dropout rates: Pupils in the Northeast generally had the lowest dropout rates, as measured by the percent of persons aged 16 to 21 years who were not attending high school and had not graduated (figure 7). The South generally had the highest rates, followed by the North Central region, while in the West the trend was toward low or medium dropout rates.

FIGURE 7.--DISTRIBUTION OF PUBLIC SCHOOL PUPILS, BY DISTRICT DROPOUT RATE AND BY REGION: UNITED STATES, APRIL 1970

4. LARGE SCHOOL DISTRICTS

Table 27 shows detailed characteristics for each of the 182 school districts with enrollments over 25,000. These districts had nearly 15 million public school pupils, or 33 percent of the pupils covered by this report.

Each district is shown with a data series for the total population and additional data series for "Negro" and/or "Spanish heritage" if either or both of these populations was greater than 1,000.

The data in table 27 include:

- Total population and child population by three age ranges;
- Racial and ethnic population distribution (Negro, Spanish heritage, Non-English mother tongue, foreign stock);
- Median family income;
- Percent families below four poverty levels (\$3,000 and three levels of Census-defined poverty);
- Years of school completed;
- Vocational training, by sex;
- Nonpublic school (parochial and other) and college enrollment;
- High school dropout rates with associated unemployment, by sex;
- Percent migrants from outside State or standard metropolitan statistical area (SMSA);
- Parent absence;
- Employment of high-school-age children, by sex;
- Labor force unemployment and white collar employment, by sex;

• Children in female-headed households.

Since the amount of information shown in table 27 is extensive, the following discussion will concentrate on selected social and economic characteristics with respect to 10 of the 11 largest U.S. school districts.* These districts are:

New York City, New York

Los Angeles Unified, California

City of Chicago, Illinois

Philadelphia City, Pennsylvania

Detroit City, Michigan

Dade County, Florida

Houston Independent School District, Texas

Baltimore City, Maryland

Dallas Independent School District, Texas

Prince Georges County, Maryland

Negro composition (variable 6): Each school district had a sizable Negro population, ranging from 14 percent for Prince Georges County to 46 percent for Baltimore City.

Spanish heritage composition (variable 7): The Spanish heritage concentration was more varied (depending on the geographic location of the school district), ranging from a low of .8 percent for Baltimore City to a high of 24 percent for Dade County.

Non-English mother tongue (variable 8): High concentrations of non-English mother tongue were indicated, ranging from 11 percent for Prince Georges County to 45 percent for New York City.

Median family income (variable 10): The median family income in all 10 school districts ranged from \$8,815 to \$12,449, with the average being \$9,952. In all but one case, the median family income for the Negro and/or Spanish heritage populations was lower than that for the total district population.

*Honolulu, Hawaii, is not included in this discussion since it is a special case where the school district is the entire State.

Poverty concentration (variable 15): For 9 of the 10 school districts, children with family incomes below the poverty level ranged from 16 percent for Dade County to 24 percent for Baltimore City. The percentage for Prince Georges County was 6. In addition, the Negro and Spanish heritage subpopulations tended to have higher concentrations of families with incomes below the poverty level, more noticeably so for Negroes.

Parent absence (variable 32): The absence of one or both parents ranged from 13 percent for Prince Georges County to 36 percent for Baltimore City.

Appendix A.--User Cautions

The computer files from which this report was prepared were created by assigning 1970 Census Fourth Count population data to local school districts. This report, therefore, shares both the limitations of the Census data and the additional limitations introduced by the summarization for school districts.

Limitations of the Census Data

Suppression: In order to protect the confidentiality of the individual responses to the 1970 Census, only those tables which represented the responses of five or more people were released to the public. Since the Fourth Count of the Census represents a 5- to 20-percent sample, only subpopulations of at least 20 to 100 persons were reported. This suppression of data for small groups can lead to undercounting. This effect is most marked in Negro and Spanish heritage subpopulation data when those subpopulations represent a small part of a reporting area.

Sampling: The Fourth Count Census data represent extrapolation from 5-, 15-, and 20-percent samples of the population. A full discussion of the sampling and weighting methodology appears in 1970 Census of the Population - General Social and Economic Characteristics (PC (1)-C Series), Washington, D.C.: U.S. Government Printing Office, 1970.

Undercounting in low income and minority groups: The response rate for the 1970 Census was lower for low income and minority groups than for the population as a whole. This effect was most marked among males, among those residing in urban areas, and among persons receiving welfare and other public assistance payments.

Problems in Assigning Population Data to School Districts

The aggregation process by which the School District Data Tape files were prepared resulted in three additional limitations: split tracts and minor civil divisions (MCD), map allocation, and the omission of districts with enrollments of less than 300.

Split tracts and MCD's: Fourth Count Summary data are reported for the geographic areas defined by the Bureau of the Census. These geographic areas, called tracts and MCD's, are not usually coterminous

with school district boundaries. Whenever a tract or MCD lay in more than one school district, two assumptions were necessary. First, it was assumed that the population of the tract or MCD was evenly distributed across the land area of the tract or MCD. A school district which contained 50 percent of a tract's land area was assumed to contain 50 percent of the tract's population. Furthermore, population characteristics were assumed to be evenly distributed. If a school district contained 50 percent of a tract's area, it was also assumed to contain 50 percent of the tract's poor persons, elderly persons, high school dropouts, etc.

Map allocations: In order to determine which school districts were contained in each tract and MCD, Census maps were outlined with school district boundaries and the outlined maps were encoded by the Bureau of the Census personnel. Recent reviews of the SDDT files have cast some doubt on the accuracy of the map outlining and encoding process. It was not possible, however, to determine whether inaccuracies were due to faulty map outlining or to equal distribution assumptions described above. In any case, inaccuracies were less prevalent in the larger school districts. Therefore, table 27 contains only data for school districts with enrollments of 25,000 or more.

Exclusion of districts with enrollments of less than 300: To facilitate the map outlining and encoding process, summary data were not prepared for school districts with enrollments of less than 300. The excluded districts (those with enrollments below 300) comprise less than 2 percent of the total U.S. enrollment, but they are nonetheless significant in the Great Plains.

Appendix B.--Sampling Variability

Since the data in table 27 are estimates from 20-, 15- and 5-percent sample tabulations, they are subject to sampling variability. The standard errors of these estimates can be approximated by using the data in tables B-1 through B-3. The chances are about 2 out of 3 that the difference (due to sampling variability) between the sample estimate and the figure that would have been obtained from a complete count of the population is less than the standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than $2\frac{1}{2}$ times the standard error. The amount by which the estimated standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks. The sampling errors may be obtained by using the factors shown in table B-3 in conjunction with table B-1 for absolute numbers and in conjunction with table B-2 for percentages. These tables reflect the effect of simple response variance, but not of bias arising in the collection, processing, and estimation steps nor of the correlated errors enumerators introduce; estimates of the magnitude of some of these factors are being evaluated and will be published at a later date.

Table B-1 shows approximate standard errors of estimated numbers for most statistics based on the 20-percent sample. In determining the figures for this table, some aspects of the sample design, the estimation process, and the population of the area over which the data have been compiled are ignored. Table B-2 shows the standard errors of most percentages based on the 20-percent sample. Linear interpolation in tables B-1 and B-2 will provide approximate results that are satisfactory for most purposes. Table B-3 provides a factor by which the standard errors shown in tables B-1 and B-2 should be multiplied to adjust for the combined effect of the sample size (i.e., whether a 20-percent, 15-percent, or 5-percent sample), the sample design, and the estimation procedure.

Table B-1.--Approximate standard error for estimated number
based on 20-percent sample

(Range of 2 chances out of 3; for factors to be applied,
see table B-3 and text)

Estimated number ¹	Number of persons, families, or households in area ²								
	1,000	10,000	25,000	100,000	250,000	1,000,000	3,000,000	5,000,000	20,000,000
50	15	15	15	15	15	15	15	15	15
100	20	20	20	20	20	20	20	20	20
250	30	30	30	30	30	30	30	30	30
500	30	45	45	45	45	45	45	45	45
1,000	...	60	60	65	65	65	65	65	65
2,500	...	90	95	100	100	100	100	100	100
5,000	...	100	130	140	140	140	140	140	140
10,000	...	...	150	190	200	200	200	200	200
15,000	...	...	150	230	240	240	240	240	240
25,000	...	...	...	270	300	310	310	320	320
50,000	...	...	...	320	400	440	440	440	450
75,000	...	...	...	270	450	520	540	540	540
100,000	...	...	...	...	490	600	620	630	630

¹For estimated numbers larger than 100,000, the relative errors are somewhat smaller than for 100,000.

²An area is the smallest complete geographic unit to which the estimate under consideration pertains. Thus, the area may be the State, city, county, standard metropolitan statistical area, urbanized area, or the urban or rural portion of the State or county. The rural farm or rural nonfarm population in the State or county, the Negro population, etc., do not represent complete areas.

Poverty status in 1969			
Persons	1.8	2.2	
Families	1.1	1.2	
All other	1.0	1.2	

1. When determining the standard error of a number that relates to families or households rather than to persons, use the number of families or households in the area, rather than the population of the area, for selecting the appropriate column in table B-1.
2. Tabulations of characteristics for persons of Spanish heritage (Puerto Rican birth or parentage, Spanish language or Spanish surname) are based on the 15-percent sample, and the appropriate factor is found in the 15-percent column for the subject or for Spanish heritage, whichever is the larger.

Appendix C.--Organization of Census Data by School District

During the 1970 Census of Population and Housing, the residents of the United States were asked a broad set of questions about their social and economic status. The individual responses to those questions have been summarized by the U.S. Bureau of the Census in printed tables and computer files. Summaries have been prepared for political units (States, cities, Congressional districts, etc.) and for areas defined by the Bureau of the Census as Standard Metropolitan Statistical Areas, tracts, block groups, blocks, and enumeration districts. Researchers and administrators in a variety of fields have found these summary reports and computer files to be valuable resources.

Since many educators expressed a need for 1970 Census data summarized by local school district, the National Center for Education Statistics began in the late 1960's to investigate methods for producing and periodically updating school district summaries of 1970 Census data. A policy of using existing summaries of Census data instead of individual responses to the Census was adopted as the most cost-effective approach to producing school district summaries. This policy was implemented in three phases:

- Phase I: drawing approximately 11,800 school district boundaries on Census reporting area maps;
- Phase II: recording the Census reporting areas contained in each school district;
- Phase III: combining the Census reported data in accordance with the Phase II lists to produce school district summaries.

In Phase I of the project, Census enumeration district and block group maps were sent to local school district administrators throughout the country. The administrators outlined the boundaries of each elementary, senior, unified, and vocational school district with an enrollment of 300 or more. The many districts with enrollments of less than 300 were combined into a single district for each State. Pupils in these districts constituted less than 2 percent of the total enrollment. The outlined maps were then forwarded to the Bureau of the Census for Phase II.

In Phase II, Bureau of the Census staff examined the outlined maps and recorded the school district in which each Census enumeration district (ED) and block group (BG) was located. Sometimes, part of an ED or BG was located in one school district and part in one or more districts. When this happened, the recorder estimated and recorded the fraction of the ED or BG area contained in each district. All information was transcribed to computer-readable format and the final dictionary was again checked for completeness and consistency.

In Phase II, computer systems were developed to combine ED and BG summary data from the First Count of the 1970 Census in accordance with the specifications in the Phase II dictionary.

The resultant First Count School District Data Tape (SDDT) computer file contains age, sex, racial, and housing data for each U.S. school district with an enrollment of 300 or more.

A separate system converted the school district/ED and BG dictionary of Phase II into a school district/Census tract and minor civil division (MCD) dictionary. This dictionary was then used to combine summary tract and MCD statistics from the Fourth Count of the 1970 Census and resulted in the Fourth Count School District Data Tape. The widely distributed Fourth Count SDDT contains detailed income, employment, nativity, and family structure data for each school district with enrollment of 300 or more, and is the source of all data presented in this publication.
